NABH Cell

S. S. Hospital, Davangere has been granted with Pre Entry-Level accreditation from the National Accreditation Board for Hospitals and Healthcare Providers (NABH) constituent board of the Quality Council of India (QCI), New Delhi for providing quality health facility to patients. NABH is a board member of the International Society for Quality in Healthcare (ISQua). This accreditation stands as benchmark for progress of the healthcare organizations.

In this view the hospital has put in place a qualitative patient care delivery system which is approachable, affordable, answerable and accountable in a transparent manner. Under the domain of pre-entry level accreditation certification, the hospital is as usual committed to address the needs of all segments of population irrespective of region, religion or community.

The Healthcare was given the certificate after an inspection by two NABH assessors on 14th August 2017. This certification is valid from **November 15th 2017 to November 14th 2019** and marching towards grant of final accreditation which will be renewed after three years. The institution has to achieve 683 objectives from 10 chapters to fulfil the criteria for NABH accreditation. NABH team can inspect the institution at any point of time to check for the standards.

The Management and entire administration whole heartedly thank the staff members of SSIMS&RC for their tireless effort in achieving this goal.

CASE REPORT

BLOOD TRANSFUSION CHALLENGE TO ANAESTHESIOLOGIST A CASE OF BOMBAY BLOOD GROUP

Dr. Arun Kumar Ajjappa, Professor and Head. Dr. Shivakumar K.P, Associate Professor.

Dr. Nishant Agrawal, Postgraduate.

Dept. of Anaesthesiology and Critical Care, SSIMS & RC, Davangere, Karnataka.

ABSTRACT

Anaesthetic management of L5-S1 spondylolisthesis correction by posterior instrumentation with pedicle screw fixation of a 40 year old male patient with Bombay red cell phenotype is discussed. It is emphasized that with a good team work between orthopedician, anesthesiologist and nursing staff will make it possible to produce excellent results in these cases.

Key words: Autologous transfusion, Bombay blood group, spine surgeries.

INTRODUCTION

Bombay blood group is a rare autosomal recessive within the ABO blood group.^[1] The estimated prevalence is 1 in 10,000 in India and 1 in 100,00,000 outside India^[2]. We have come across a patient with rare blood group in our institution with spondylolisthesis at 2 levels L4-L5, L5-S1 posted for posterior instrumentation with pedicle screw fixation which underwent for 6 hours.

CASE REPORT

A 40 years old male patient presented with low backache and was diagnosed to have L4-L5 and L5-S1 spondylolisthesis. During the pre operative evaluation the patient was found to have Bombay blood group. MRI of lumbosacral spine confirmed the L4-L5 disc posterior annular tear with postero antral disc protrusion and grade-1 anterior listhesis of L5 over S1. Laboratory investigations and airway assessment were unremarkable. The baseline hemoglobin was 10.2g/dl. Preoperative preparation included arranging for adequate blood. On the day of surgery, baseline vitals noted and peripheral vein cannulated. General anaesthesia regime included the use of glycopyrolate 0.01mg/kg, morphine 0.1mg/kg, thiopentone 5mg/kg and vecuronium 0.1mg/kg intravenously followed by intubation with armoured tube and the patient was then put on prone position.

Tranexamic acid 15mg/kg IV bolus was administered and patient was maintained with isoflurane and vecuronium. Patient was haemodynamically stable intra-operatively. At the end

of the procedure, we had advised the surgeon to place an epidural catheter for post-op analgesia. Post surgery hemoglobin was 8.6g/dl. One unit of packed cells was transfused following which hemoglobin was 10g/dl. Postoperative analgesia was provided with 6ml of 0.1% bupivacaine + 50mg tramadol epidurally. Patient was discharged on the 12th postoperative day.

DISCUSSION

Bombay blood group lacks A, B, H antigens on

red cells but has anti-A, anti-B and anti-H antibodies in serum reacting with all O blood groups. For elective cases, autologous transfusion or RBC transfusion from donor of Bombay phenotype is a good alternative. However, in cases of emergency it is difficult to find Bombay blood group in any blood bank. Facilities for cryopreservation can also be beneficial for rare blood group.

CONCLUSION

Spine surgeries are always challenging for anaesthesiologist. Thorough pre-op assessment, proper monitoring intraoperatively along with post operative analgesia, physiotherapy and rehabilitation can result in excellent outcomes and patients with Bombay phenotype RBC present as type "O" but they cannot receive RBCs from any other phenotype other than Bombay blood group.
